The present invention describes an Bscherichia coll strain (I) deficient in Chromosomal deep and prc encoding protease DegP and Prc, respectively, and harbouring a mutant spr gene, the product of mutant spr gene suppresses growth phenotypes exhibited by strains harbouring prc mutants. Coll is useful for producing a polypeptide, by culturing (I) comprising nucleic acid encoding the polypeptide, by culturing (I) comprising nucleic acid that the nucleic acid is expressed, and recovering the pertach such that the nucleic acid is expressed, and recovering the heterologous polypeptide from the strain. The heterologous polypeptide is proteolytically sensitive. Culturing of (I) is performed in a fermentor under conditions of high- or low-cell density fermentation. The polypeptide is an antibody (humanised or full-length artibody) or Apo2 ligand. The antibody (humanised or full-length anti-vascular endothelial growth factor (VBGF), anti-tissue factor, 2C4, anti-tasue antibody is also an antibody is an antibody is also an antibody fragment having a light chain (kappa light chain). The antibody fragment having a light chain (kappa light chain). The antibody fragment tayer fusion, anti-CD1a antibody is also an antibody fragment taying a light chain (kappa light chain). The antibody fragment tissue factor Fab'. Pab', anti-tissue factor Fab'2 or                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel Escherichia coli strain useful for producing polypeptide, deficient in degP and prc encoding protease, and harboring mutant spr gene, product of gene suppresses growth phenotypes of strains harboring
                                                                                                                                                                                                                                     Bacterial host, protease, degP, prc, spr, anti-VEGF antibody, anti-Dody, humanised, Apo2 ligand, anti-CD18, anti-tissue factor, 2C4, anti-CD20, anti-vascular endothelial crowth factor;anti-Her-2, anti-CD40, Fab, anti-CD11a, Fab'; Fab'2, Fab'2-leucine zipper fusion, anti-VEGF Fab.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match 100.0%; Score 553; DB 23; Length 212; Best Local Similarity 100.0%; Pred. High potency recombinant antibody, useful for preventing and treating diseases induced or caused by viruses, especially respiratory syncytial virus and parainfluenza virus, has high kinetic association rate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a high potency antibody including its immunologically active portions, fragments and segments other than vitaxin. The antibody has increased potency, high rate constant for antibody-antigen complex formation and high affinity for any desirred antigen. The high potency antibody is also useful for nullifying or ameliorating the effects of addictive drugs, such as cocaine. The high potency has specificity for antigenic determinants found on microbes such as viruses, bacteria or fungi, antigens found on cancer cells and toxic substances or product of toxic substances. The high potency antibody is useful for preventing or treating a disease caused by a virus such as respiratory syncytial virus (RSV) and parantilemenza
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     107 RTVAAPSVFIPPPSDEQLKSGTASVVCLLNNFYPREAKVQWKVDNALQSGNSQESVTEQD

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Production of recombinant antibodies (Ab), Ab fragments or Ab fragment/enzyme fusion proteins can be used for tumour therapy, cospecially when the fusion protein comprises a tumour specific of the fragment and an enzyme capable of converting a non-toxic prodrug to a toxic drug. The fusion proteins are constructed in expression converting an expression proteins are constructed in expression products to be isolated in a soluble functional allowing expression products to be isolated in Soluble functional form without renaturation. The Ab fragment is an PAb fragment or an antigen binding region. In the fusion protein, the Ab component is humanised and the enzyme component is a human cytoplasmic enzyme. This fusion protein comprises the antibody constant and variable light chain regions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      RIVAAPSVFIFPPSDEQLKSGTASVVCLLNNFYPREAKVQMKVDNALQSGNSQESVTEQD

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       constant
NAME OF THE PROPERTY OF THE PR
```

Watkins JD;

Wu H,

Huse WD,

The invention relates to a high potency antibody including its immunologically active portions, fragments and segments other than vitaxin. The antibody has increased potency, high rate constant for antibody-antigen complex formation and high affinity for any desired antigen. The high potency antibody is also useful for nullifying or meliorating the effects of addictive drugs, such as cocaine. The high potency has specificity for antigenic determinants found on microbes such as viruses, bacteria or fungi, antigens found on cancer calls and toxic substances or product of toxic substances. The high potency antibody is useful for preventing or treating a disease caused by a nitus (PUV). The present sequence is humanised high potency avirus (PUV). The present sequence is humanised high potency antibody full length light chain variable region. 213 AA; Sequence Query Match

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

; Sequence 40, Application US/09796848A	
; Patent No. US20020098189A1	
; GENERAL INFORMATION:	
Young, James F.	
, APPLICANT: Johnson, Leslie S.	
; APPLICANT: Huse, William D.	
, APPLICANT: Wu, Herren	
OF INVENTION: B	
; TITLE OF INVENTION: Producing Them	
щ	
APPLICATION N	
; PRIOR FILING DATE: 2000-03-01	
; NUMBER OF SEQ ID NOS: 59	
; SOFTWARE: Patentin Ver. 2.1	
; SEO ID NO 40	
LENGTH: 213	
ORGANISM: Artificial Sequence	
COTHER INFORMATION: Description of Artificial Sequence: Light chain of	
OTHER INFORMATION: high potency antibody.	
US-109-140

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Sequence 6, Application US/08480753

Patent No. 5830675

GENERAL INFORMATION:
APPLICANT: Targan M.D., Stephan R.
APPLICANT: Targan M.D., Alda M.
TITLE OF INVENTION: PERINUCLEAR ANTI-NEUTROPHIL CYTOPLASMIC ANTIBODY OF TITLE OF INVENTION: ULCERATIVE COLITIS, PRIMARY SCHEROSING CHOLANGITIS, OR TITLE OF INVENTION: TYPE I AUTOIMMUNE HEPATITIS
NUMBER OF SEQUENCES: 24

CORRESPONDENCE ADDRESS:
ADDRESSEE: Wendy A. Whiteford, Esq.
STREET: 444 South Flower Street, Suite 2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  108 ŘÍVAAPSVPIPPPSDEQIKSCTASVVCLIANPYPŘEAKVOWKYDNALOSGNSQESVTEQD 167

A) Introns: 99/A: 111/1/; 221/1
C; Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kap) hain disulfide bonds. In some cases, such as IgA and IgM, the subunits associate into la C; Superfamily: immunoglobulin C resjon; immunoglobulin C resjon; immunoglobulin to resjon; heterotetramer; immunoglobulin P: 20-85/Domain: immunoglobulin to Monology cIMI:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               122
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9

Ig heavy chain precursor (B/MT.4A.17.H5.A5) - bovine
Ig heavy chain precursor (B/MT.4A.17.H5.A5) - bovine
N.Alternate names: Ig gamma-1 chain C region (clone 8.10)
C;Species: Bos primigenius taurus (cattle)
C;Accession: S22080; S06610; A31303
R;Sanders, P.G.
Submitted to the EMBL Data Library, November 1991
A;Reference number: S22080
A;Accession: Cattle Cat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ajonetics:

Biochemistry 20:2361-2370(1981).

MISCELLANBOUS: NIE HAS THE GIM(17) ALLOTYPIC MARKER, 97-K, & THE GIM(1) MARKERS, 239-D & 241-L. KOL & EU SEQUENCES HAVE THE GIM(3) MARKER & THE GIM (NON-1) MARKERS.

MISCELLANBOUS: NIE ALSO DIFFERS IN THE AMIDATION STATES OF 35.116,198,269 & 272.

MISCELLANBOUS: EU ALSO DIFFERS IN THE AMIDATION STATES OF RESIDUES 155, 166, 177, 198, 269, AND IN THE ORDER OF RESIDUES 268-272.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SECUENCE (MYELOWA PROTEIN KOL), AND DISULFIDE BONDS.
